

## Cooling Solutions

## Central Utility Plants

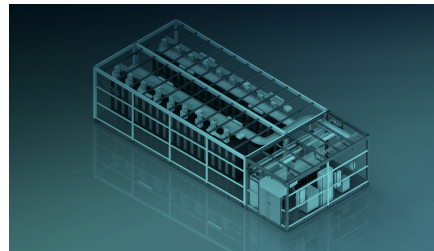

## Immersion Cooling

## Data Halls

## Edge Data Systems

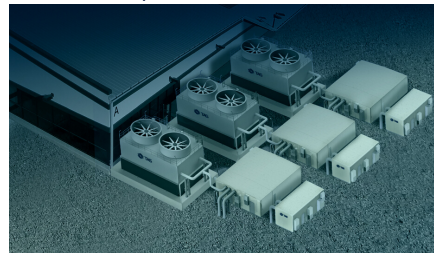

## High Tech Manufacturing

## Electrical Solutions

## Utility Infrastructure

## Turbine Inlet Chilling

## Modular, Scalable, Reliable and Efficient

TAS can help you minimize your project schedule risk and reduce your labor force at site! We can modularize any of your facilities utility systems by studying your process and applying our experienced engineers minds to optimize the build into manageable prefabricated skids. This approach can be applied to any process like air systems for drawing or heating, cooling or chilled water production or distribution, waste water systems, heat recovery or heat generation, electrical equipment and distribution of electrical services, central controls, safety, communications, fire detection and suppression or any specialty process that you would typically require in your plant.

### Efficiency & Reliable

Reduces overall project lifecycle with less risk to project timeline and budget creep, complete design to build services under one roof, minimize outside project schedule risks, more efficient manufacturing process in a factory, more controlled quality management, incorporate design to maximize factory testing, & reduction of specialized trade & materials required at site

### Scalable & Modular

Modular approach helps reduce site footprint, custom design to suit specific process and project site needs, manage build cycle to optimize site installation and handling
